Legend & Notes

Indication of available capacity to support 2031 population targets	Capacity Available	Capacity Available to meet targeted population growth to 2031
	Capacity Available - Level of service (LoS) improvement required	Capacity Available to meet targeted population growth to 2031 although an improvement to the Level of service (LoS) will be required. This may take the form of leakage reduction and/or capital investment to maintain/improve levels of service as the demand increases. Proposed solutions will be developed & prioritised through the National Water Resources Plan and investment planning process.
	Potential Capacity Available - Level of service (LoS) improvement required	Capacity constraints exist, connection applications will be assessed on an individual basis considering their specific demand requirements. An improvement to the Level of service (LoS) will be required to meet 2031 population targets. This may take the form of leakage reduction and/or capital investment to maintain/improve levels of service as the demand increases. Proposed solutions will be developed & prioritised through the National Water Resources Plan and investment planning process.
	Capital Investment Required	Capacity not available - Capital investment required to increase capacity. Proposed solutions will be developed & prioritised through the National Water Resources Plan and investment planning process.
Level of Service (LoS)	Level of Service (LoS) refers to the reliability of the supply that our customers can expect to receive.	
Water Resource Zone (WRZ)	A WRZ is an independent water supply system serving a region, city, town or village and is governed by topography or the extent of the water distribution network in an area. A WRZ may include multiple Water Treatment Plants and/ or sources.	
General	(i) The determination of capacity is based on a standardised national review of the available information. (ii) The information in this table is based on available information at the date of issue and is subject to change. (iii) This register provides commentary on the ability of a WRZ to produce water to support the planned growth, it does not consider the capacity of the distribution network. A Pre-Connection Enquiry should be submitted to Irish Water to determine the feasibility of connecting any particular site to the Irish Water network, feasibility should not be inferred from this register. (iv) Target settlement populations for this register have been informed by local, regional and national planning policy.	
Other	Project is being scoped to address capacity constraints in Clonakilty WRZ. Project ongoing to address capacity constraints in Glengarriff WRZ.
