## 1 EXECUTIVE SUMMARY AND INTRODUCTION TO THE 2021 AER

This Annual Environmental Report has been prepared for D0334-01, Kilworth, in Cork in accordance with the requirements of the wastewater discharge licence for the agglomeration. Specified reports where relevant are included as an appendix to the AER.

#### 1.1 ANNUAL STATEMENT OF MEASURES

A summary of any improvements undertaken is provided where applicable.

Substantial Works completed in September 2021 to address on-going Ammonia (as N) ELV Breaches. Aeration Basin Diffusers and Clarifier Sludge Scrapers replaced.

#### 1.2 TREATMENT SUMMARY

The agglomeration is served by a wastewater treatment plant(s)

• Kilworth WWTP with a Plant Capacity PE of 2500, the treatment type is 3P - Tertiary P removal

#### 1.3 ELV OVERVIEW

The overall compliance of the final effluent with the Emission Limit Values (ELVs) is shown below. More detailed information on the below ELV's can be found in Section 2.

Discharge Point Reference	Treatment Plant	Discharge Type	Compliance Status	Parameters failing if relevant
TPEFF0500D0334SW001	Kilworth WWTP	Treated	Non-Compliant	Ammonia-Total (as N) mg/l

# 1.4 LICENCE SPECIFIC REPORTING

#### Assessment / Report

There are no Licence Specific Reports included in this AER.

## 2 TREATMENT PLANT PERFORMANCE AND IMPACT SUMMARY

#### 2.1 KILWORTH WWTP - TREATED DISCHARGE

#### 2.1.1 INFLUENT MONITORING SUMMARY - KILWORTH WWTP

A summary of influent monitoring for the treatment plant is presented below. This monitoring is primarily undertaken in order to determine the overall efficiency of the plant in removing pollutants from the raw wastewater.

Parameters	Number of Samples	Annual Max	Annual Mean
BOD, 5 days with Inhibition (Carbonaceo mg/l	14	550	221
COD-Cr mg/l	14	1166	553
Total Nitrogen mg/l	14	144	60
Total Phosphorus (as P) mg/l	14	12	5.90
Hydraulic Capacity	N/A	959	236

If other inputs in the form of sludge / leachate are added to the WWTP then these are included in Section 2.1.5 if applicable.

#### **Significance of Results:**

The annual mean hydraulic loading is less than the peak Treatment Plant Capacity. The annual maximum hydraulic loading is less than the peak Treatment Plant Capacity. Further details on the plant capacity and efficiency can be found under the sectional 'Operational Performance Summary'. The design of the wastewater treatment plant allows for peak values and therefore the peak loads have not impacted on compliance with Emission Limit Values.

#### 2.1.2 EFFLUENT MONITORING SUMMARY - TPEFF0500D0334SW001

Parameter	WWDL ELV (Schedule A)	ELV with Condition 2 Interpretation included Note 1	Interim % reduction from influent concentration	Number of sample results	Number of exceedances	Number of exceedances with Condition 2 Interpretation included	Annual Mean	Overall Compliance (Pass/Fail)
COD-Cr mg/l	125	250	N/A	12	N/A	N/A	20	Pass
Suspended Solids mg/l	25	62.5	N/A	12	1	N/A	6.26	Pass
BOD, 5 days with Inhibition (Carbonaceo mg/I	10	20	N/A	12	N/A	N/A	3.72	Pass
pH pH units	9.00	9.00	N/A	12	N/A	N/A	7.96	Pass
ortho- Phosphate (as P) - unspecified mg/l	0.850	1.02	N/A	12	N/A	N/A	0.380	Pass
Ammonia-Total (as N) mg/l	0.850	1.02	N/A	12	7	7	5.99	Fail

#### Notes:

### **Cause of Exceedance(s):**

Ammonia (as N) ELV was breached on a number of occasions throughout 2021, relevant Effluent Monitoring Sample Dates are 28/01/2021, 18/03/2021, 15/04/2021, 27/05/2021, 24/06/2021, 29/07/2021 and 09/09/2021. The Ammonia (as N) ELV Breaches are due to issues identified with

<sup>1 –</sup> This represents the Emission Limit Values after the Interpretation provided for under Condition 2 of the licence is applied

<sup>2 -</sup> For pH the WWDA specifies a range of pH6 - 9

failure or partial failure of a number of Aeration Grid Diffusers which restricted or compromised the transfer of Dissolved Oxygen to the Treatment Process. Compliance with the Ammonia (as N) Parameter was restored following replacement of the Aeration Diffusers in September 2021.

#### **Significance of Results:**

The WWTP is non compliant with the ELV's set in the Wastewater Discharge Licence. The impact on receiving waters is assessed further in Section 2.

# 2.1.3 AMBIENT MONITORING SUMMARY FOR THE TREATMENT PLANT DISCHARGE TPEFF0500D0334SW001

A summary of monitoring from ambient monitoring points associated with the wastewater discharge is provided in the sections below. For discharges to rivers upstream (U/S) and downstream (D/S) location data is provided. For other ambient points in lakes, coastal or transitional waters, monitoring data from the most appropriate monitoring station is selected.

The table below provides details of ambient monitoring locations and details of any designations as sensitive areas.

#### **Significance of Results:**

The WWTP discharge was not compliant with the ELV's set in the wastewater discharge licence for the following: Ammonia-Total (as N) mg/l.

The ambient monitoring results do not meet the required EQS at the downstream monitoring location. The EQS relates to the Oxygenation and Nutrient Conditions set out in the Surface Water Regulations 2009.

Based on ambient monitoring results a deterioration in BOD, Ammonia (as N) and Ortho-Phosphate (As P)., concentrations downstream of the effluent discharge is noted.

A deterioration in water quality has been identified, however it is not known if it or is not caused by the WWTP.

Other causes of deterioration in water quality in the area are: Note the presence of another privately operated discharge to the receiving waters in addition to the WWTP Primary Discharge between the U/S and D/S Ambient Monitoring Locations.

The discharge from the wastewater treatment plant does not have an observable negative impact on the Water Framework Directive status.

#### 2.1.4 OPERATIONAL PERFORMANCE SUMMARY - KILWORTH WWTP

#### 2.1.4.1 Treatment Efficiency Report - Kilworth WWTP

Treatment efficiency is based on the removal of key pollutants from the influent wastewater by the treatment plant. In essence the calculation is based on the balance of load coming into the plant versus the load leaving the plant. The efficiency is presented as a percentage removal rate.

A summary presentation of the efficiency of the treatment process including information for all the parameters specified in the licence is included below:

Parameter	Influent mass loading (kg/year)	Effluent mass emission (kg/year)	Efficiency (% reduction of influent load)	
TN	5688	N/A	N/A	
ss	N/A	724	N/A	
COD	52460	2309	96	
ТР	559	N/A	N/A	
cBOD	20937	431	98	

Note: The above data is based on sample results for the number of dates reported

#### 2.1.4.2 Treatment Capacity Report Summary - Kilworth WWTP

Treatment capacity is an assessment of the hydraulic (flow) and organic (the amount of pollutants) load a treatment plant is designed to treat versus the current loading of that plant.

Kilworth WWTP			
Peak Hydraulic Capacity (m³/day) - As Constructed			
DWF to the Treatment Plant (m³/day)			
Current Hydraulic Loading - annual max (m³/day)			

Kilworth WWTP				
Average Hydraulic loading to the Treatment Plant (m³/day)	236			
Organic Capacity (PE) - As Constructed				
Organic Capacity (PE) - Collected Load (peak week)Note1				
Organic Capacity (PE) - Remaining				
Will the capacity be exceeded in the next three years? (Yes/No)	No			

Nominal design capacities can be based on conservative design principles. In some cases assessment of existing plants has shown organic capacities significantly higher than the nominal design capacity. Accordingly plants that appear to be overloaded when comparing a collected peak load with the nominal design capacity can be fully compliant due to the safety factors in the original design.

### 2.1.5 SLUDGE / OTHER INPUTS - KILWORTH WWTP

'Other inputs' to the waste water treatment plant are summarised in table below

Input type	Quantity	Unit	P.E.	% of load to WWTP	Included in Influent Monitoring (Y/N)?	Is there a leachate/sludge acceptance procedure for the WWTP?	Is there a dedicated leachate/sludge acceptance facility for the WWTP?  (Y/N)
There is no Sludge and Other Input data for the Treatment Plant included in the AER.
