National Water Resources Plan (NWRP)

The plan sets out how we will **balance the supply and demand for drinking water over the short, medium and long term.**

**Calculate the demand for water** from homes, businesses, farms and industry now and into the future.

**Assess the amount of water** we have available.

**Identify areas** where there is not enough water supply to meet demand.

**How climate change** will impact our water.

**Develop a national plan** to ensure there will be enough water to meet demand.

Our three pillar approach will ensure we have a sustainable, secure and reliable drinking water supply for everyone.

**Lose Less**

Reduce leakage

**Use Less**

Improve water efficiency

**Supply Smarter**

Improve infrastructure
